

Register file structure : regfile_xgs_ctrl.pdf

Created by jmansill on 2020/04/29 10:32:22

Register file CRC32 : 0x47E96102

1. Main Parameters

Register file endianness: little endian

Address bus width: 12 bits

Data bus width: 32 bits

2. Memory Map

| Section name | Address(es) / Address Ranges | Register name | Access Type |

Section: ACQ

Address Range: [0x100 - 0x2CC]

GRAB_CTRL

GRAB ConTRoL Register

Address: section "ACQ" base address + 0x000

Description:

Grag Control Register

| | | | | | | | |
|---------------------|------------------|--------------|------------|----------|------------------|-----------|--------------------------|
| 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
| RESET_GRAB | Reserved | GRAB_ROI2_EN | ABORT_GRAB | Reserved | | | |
| 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
| Reserved | | | | | | | TRIGGER_O VERLAP_BUFn |
| 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |
| TRIGGER_O VERLAP | TRIGGER_ACT(2:0) | | | Reserved | TRIGGER_SRC(2:0) | | |
| 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
| Reserved | | | GRAB_SS | Reserved | | BUFFER_ID | GRAB_CMD |

| | | |
|--------------------------------|----------------------------------------------|------------------|
| RESET_GRAB <i>RW</i> | | |
| | This register resets the entire python_ctrl. | |
| Value at Reset: | 0x0 | |
| Possible Values: | 0x0 | Reset not active |
| | 0x1 | Reset active |

| | | |
|----------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|
| GRAB_ROI2_EN <i>RW</i> | | |
| | Enable the second ROI on the frame (KNS). This register is not DB. 1) No Y overlap is allowed 2) Xsize must be the same for the two ROI for the moment(DMA constraint). 3) EOF and SOF in between the two in-frame ROIs will be masked to the DMA. The DMA will see one frame, with the two ROI inside. | |
| Value at Reset: | 0x0 | |
| Possible Values: | 0x0 | Dual ROI disable |
| | 0x1 | Dual ROI enable |

| | | |
|----------------------------------------|-------------------------------------------------------------------|------------------|
| ABORT_GRAB <i>WO/AutoClr</i> | ABORT GRAB | |
| | This is the grab Abort signal, it will reset all the grab queued. | |
| Possible Values: | 0x0 | Normal operation |
| | 0x1 | Reset Grab |

| | | |
|------------------------------------------------------|------------------------------------------------------|----------------------------------------------------------------------------|
| TRIGGER_OVERLAP_BUF Fn <i>RW</i> | | |
| | NOT FULLY VALIDATED. DON'T USE. SET IT TO '0'. | |
| Value at Reset: | 0x0 | |
| Possible Values: | 0x0 | Buffer the trigger received during the dead window in PET mode and execute |
| | 0x1 | The trigger will be ignored during dead window in PET mode. |

| | | |
|-------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------|
| TRIGGER_OVERLAP <i>RW</i> | | |
| | This field enables the trigger overlap. In this mode the exposure and the readout of the sensor can be done in parallel for higher framerates. | |
| Value at Reset: | 0x1 | |
| Possible Values: | 0x0 | Trigger Overlap disable |
| | 0x1 | Trigger Overlap enable (default) |

| | | |
|---------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------|
| TRIGGER_ACT (2:0) <i>RW</i> | TRIGGER ACTivation | |
| | <p>This is the trigger activation . This register selects the activation of the trigger when the trigger source is set to Hardware Snapshot mode . This register is Double Buffered, so the trigger activation may change from one grab command to another.</p> <p>In activation Level HI/LO with EXPOSURE_MODE register set to Timed, the camera will be triggered in continuous way if the level of the external trigger remains at the LEVEL programmed in this register.</p> <p>In activation Level HI/LO with EXPOSURE_MODE register set to Trigger Width, the Exposure time will be set by the level of the trigger input. The FPGA exposure registers will be ignored. The Dual and Triple slope are not supported in the mode.</p> | |
| Value at Reset: | 0x0 | |
| Possible Values: | 0x0 | Rising edge |
| | 0x1 | Falling edge |
| | 0x2 | Rising or Falling edge |
| | 0x3 | Level HI |
| | 0x4 | Level LO |
| | 0x5 | RESERVED |
| | 0x6 | RESERVED |
| | 0x7 | RESERVED |

| | | |
|---------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------|
| TRIGGER_SRC (2:0) <i>RW</i> | TRIGGER SouRCe | |
| | <p>This is the trigger source. This register selects the source of the grab trigger. This register is Double Buffered, so the trigger source may change from one grab command to another. TRIGGER_SRC(1) may be seen as a TRIGGER_STATE by the software driver.</p> | |
| Value at Reset: | 0x0 | |
| Possible Values: | 0x0 | RESERVED |
| | 0x1 | Immediate mode (Continuous) |
| | 0x2 | Hardware Snapshot mode |
| | 0x3 | Software Snapshot mode |
| | 0x4 | SFNC mode (auto trig) |

| | | |
|-------------------------------------|----------------------------------------------------------------------------------------------------|--------------|
| GRAB_SS <i>WO/AutoClr</i> | GRAB Software Snapshot | |
| | This is the software snapshot register when the trigger source selected is Software Snapshot mode. | |
| Possible Values: | 0x0 | Idle |
| | 0x1 | Start a grab |

| | | |
|-------------------------------|---------------------------------------------------------------------------|--|
| BUFFER_ID <i>RW</i> | | |
| | This is the ID of the DMA parameters to associate with this grab command. | |
| Value at Reset: | 0x0 | |

| | | |
|--------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|
| GRAB_CMD <i>WO/AutoClr</i> | GRAB CoMmanD | |
| | <p>This is MIL GRAB command.</p> <p>When the trigger source is set to Immediate mode(Continuous), an exposure sequence will be automatically executed. When the trigger source is set to Software Snapshot mode or Hardware Snapshot mode, GRAB_CMD will act as an ARM.</p> <p>The GRAB_CMD will take around 13 clks to record the grab parameters to the SPI fifo. The GRAB_CMD_DONE register may be read to avoid fifo corruption before sending another Grab command instruction.</p> | |
| Possible Values: | 0x0 | Idle |
| | 0x1 | Start grab command |

GRAB_STAT

Address: section "ACQ" base address + 0x008

| | | | | | | | |
|---------------|----------------------|---------------|---------------|---------------------|--------------|-------------|-----------|
| 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
| GRAB_CMD_DONE | ABORT_PET | ABORT_DELA | ABORT_DONE | Reserved | | TRIGGER_RDY | |
| 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
| Reserved | ABORT_MNGR_STAT(2:0) | | | TRIG_MNGR_STAT(3:0) | | | |
| 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |

| | | | | | | | |
|-----------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|-------------------------|--|--|--|--|
| GRAB_CMD_DONE <i>RO</i> | GRAB CoMmanD DONE | | | | | | |
| | The GRAB_CMD will take around 13 clks to reccord the grab parametters to the SPI fifo. This register may be readed to avoid fifo corruption before sending another Grab command instruction. | | | | | | |
| Possible Values: | 0x0 | | Grab Command in process | | | | |
| | 0x1 | | Grab command idle | | | | |

| | | | | | | | |
|-------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|---------------------------|--|--|--|--|
| ABORT_PET <i>RO</i> | ABORT during PET | | | | | | |
| | This is the ABORT PET flag. It is set to '1' when an abort is detected in the PETengin phase of the trigger. It is set back to '0' when ABORT_DONE is set to '1'. | | | | | | |
| Possible Values: | 0x0 | | Abort in PET Phase idle | | | | |
| | 0x1 | | Abort in PET Phase active | | | | |

| | | | | | | | |
|--------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|-----------------------------|--|--|--|--|
| ABORT_DELA <i>RO</i> | | | | | | | |
| | This is the ABORT DELAI flag. It is set to '1' when an abort is detected in the delai phase of the trigger. It is set back to '0' when ABORT_DONE is set to '1'. | | | | | | |
| Possible Values: | 0x0 | | Abort in Delai Phase idle | | | | |
| | 0x1 | | Abort in Delai Phase active | | | | |

| | | | | | | | |
|--------------------------------|-----------------------------------------------------------------------------------------------------|--|------------------------------------------|--|--|--|--|
| ABORT_DONE <i>RO</i> | ABORT is DONE | | | | | | |
| | This read-only field indicates the RESET_GRAB command status. If 0, an abort sequence is executing. | | | | | | |
| Possible Values: | 0x0 | | Abort sequence not finished yet | | | | |
| | 0x1 | | Abort DONE, or not started (reset value) | | | | |

| | | | | | | | |
|---------------------------------|--|--|--|--|--|--|--|
| TRIGGER_RDY <i>RO</i> | | | | | | | |
| | | | | | | | |

| | | | | | | | |
|-------------------------------------------|-----------------------------------|--|--|--|--|--|--|
| ABORT_MNGR_STAT (2:0) <i>RO</i> | | | | | | | |
| | DEBUG ABORT MANAGER STATE MACHINE | | | | | | |

| | |
|-----------------------------|-------------------------------------|
| TRIG_MNGR_STAT (3:0) | |
| <i>RO</i> | DEBUG TRIGGER MANAGER STATE MACHINE |

| | |
|------------------------------|-----------------------------------|
| TIMER_MNGR_STAT (2:0) | |
| <i>RO</i> | DEBUG TIMER MANAGER STATE MACHINE |

| | |
|-----------------------------|----------------------------------|
| GRAB_MNGR_STAT (3:0) | |
| <i>RO</i> | DEBUG GRAB MANAGER STATE MACHINE |

| | | |
|------------------|-----------------------------------------------|------------|
| GRAB_FOT | GRAB Field Overhead Time | |
| <i>RO</i> | This is the sensor FOT (Field Overhead Time). | |
| Possible Values: | 0x0 | Not in FOT |
| | 0x1 | In FOT |

| | | |
|---------------------|-------------------------------------------------------------------------------------------------------------------------------------|--|
| GRAB_READOUT | | |
| <i>RO</i> | This is the sensor readout status. It goes to '1' on the SO_FOT and goes to '0' when the datapath decoder decodes the end of frame. | |

| | | |
|----------------------|---------------------------------------|-------------|
| GRAB_EXPOSURE | | |
| <i>RO</i> | This is the sensor integration status | |
| Possible Values: | 0x0 | Idle |
| | 0x1 | Integrating |

| | | |
|---------------------|-----------------------------------------------------------------------------------------------------|-----------------|
| GRAB_PENDING | | |
| <i>RO</i> | Grab pending status. When this register is set to one, a second grab command is queued in the fpga. | |
| Possible Values: | 0x0 | No grab pending |
| | 0x1 | Grab pending |

| | | |
|--------------------|----------------------------------------------------------------------------------------------------|--|
| GRAB_ACTIVE | | |
| <i>RO</i> | Grab active status. When this register is set to one, at least one grab command has been received. | |

| | | |
|------------------|--------------------------------------------------------------------------------------|--------------------|
| GRAB_IDLE | | |
| <i>RO</i> | GRAB IDLE status. When this register is set to '1', The grab engin is in idle state. | |
| Possible Values: | 0x0 | Grab is in process |
| | 0x1 | Grab is Idle |

READOUT_CFG1

Address: section "ACQ" base address + 0x010

| | | | | | | | |
|------------------|----|----|----------------------|----|----|----|------------|
| 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |
| Reserved | | | FOT_LENGTH_LINE(4:0) | | | | |
| 23 | 22 | 21 | 20 | 19 | 18 | 17 | 16 |
| Reserved | | | | | | | EO_FOT_SEL |
| 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 |

| FOT_LENGTH(7:0) | | | | | | | |

| | | |
|------------------------------|------------------------------------------------------------------|------------------|
| FOT_LENGTH_LINE (4:0) | Frame Overhead Time LENGTH LINE | |
| <i>RW</i> | This is the length of the Frame Overhead Time in line_time unit. | |
| Value at Reset: | 0x0 | |
| Possible Values: | Any Value | Any 16 bit value |

| | | |
|-------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| EO_FOT_SEL | | |
| <i>RW</i> | This selector selects who will generate the EO_FOT in the controller. When select 0, the EO_FOT is the falling edge detection of the monitor FOT. When select 1, the EO_FOT will be generated inside the controller with programmed FOT_LENGTH. | |
| Value at Reset: | 0x0 | |

| | | |
|--------------------------|-------------------------------------------------------------------------------------------------------------------------------------|------------------|
| FOT_LENGTH (15:0) | Frame Overhead Time LENGTH | |
| <i>RW</i> | This is the length of the Frame Overhead Time. This register is defined as number of lines. It is used when EO_FOT_SEL is set to 1. | |
| Value at Reset: | 0x0 | |
| Possible Values: | Any Value | Any 16 bit value |

READOUT_CFG_FRAME_LINE

Address: section "ACQ" base address + 0x014

| CURR_FRAME_LINES(7:0) | | | | | | | |

| | |
|--------------------------|------------------------------------------------------|
| DUMMY_LINES (7:0) | |
| <i>RW</i> | Number of lines to add in the readout (to debug XGS) |
| Value at Reset: | 0x0 |

| | |
|--------------------------------|----------------------------------------------------------------------------------------|
| CURR_FRAME_LINES (12:0) | |
| <i>RO</i> | Current number of lines in the readout calculated by the XGS controller (without FOT). |

READOUT_CFG2

Address: section "ACQ" base address + 0x018

| | | | | | | | |
|-----------------------|----|----|-----------------------|----|----|----|----|
| 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |

| READOUT_LENGTH(7:0) | | | | | | | |

| | | |
|-------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|
| READOUT_LENGTH (28:0) <i>RO</i> | | |
| | This is the readout length register. This register is calculated by the FPGA in the IRIS4 projectand gives the readout lenght without the FOT. This register will depend on the ROI, and Subsampling mode. It is used in the PET engin calculations. In Sys_Clock domain. | |
| Possible Values: | Any Value | Any 24 bits value |

READOUT_CFG3

Address: section "ACQ" base address + 0x020

| | | | | | | | |

| LINE_TIME(7:0) | | | | | | | |

| | |
|---------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| KEEP_OUT_TRIG_ENA <i>RW</i> | KEEP-OUT zone TRIGger ENable. When this register is enabled, then the trigger output will be synchronized with the line_int(monitor2) signal from the XGS sensor. To configure this keep out zone, use register READOUT_CFG4. |
| Value at Reset: | 0x0 |

| | |
|--------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| LINE_TIME (15:0) <i>RW</i> | LINE TIME This register definel the length of one line of the sensor. It includes blanking and valid time . Line Time Unit is SENSOR Clock Cycles |
| Value at Reset: | 0x16e |
| Possible Values: | Any Value between 1 and 255 |

READOUT_CFG4

Address: section "ACQ" base address + 0x024

| | |
|-------------------------------------|-------------------------------------------------------------------------------------|
| KEEP_OUT_TRIG_END (15:0) | |
| <i>RW</i> | During the line time, this register indicates the end of the trigger keep-out zone. |
| Value at Reset: | 0x16d |

| | |
|---------------------------------------|---------------------------------------------------------------------------------------|
| KEEP_OUT_TRIG_START (15:0) | |
| <i>RW</i> | During the line time, this register indicates the start of the trigger keep-out zone. |
| Value at Reset: | 0x16e |

EXP_CTRL1

Address: section "ACQ" base address + 0x028

| | | | | | | | |
|--------------------|----|----|-----------------------|--------------------|----|----|----|
| 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |

| | | |
|--------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|
| EXPOSURE_LEV_MODE | EXPOSURE LEVel MODE | |
| <i>RW</i> | This is the exposure level mode selector. When selecting the TRIGGER ACTIVATION = Level Mode, this register selects the exposure method used. When this register is set to '0' the timed mode is selected; Register EXPOSURE_SS is used for the exposure time. When this register is set to '1' the external trigger width is used for the exposure time. | |
| Value at Reset: | 0x0 | |
| Possible Values: | 0x0 | Timed Mode |
| | 0x1 | Trigger Width |

| | | |
|---------------------------|-------------------------------------------------------------------|-------------------|
| EXPOSURE_SS (27:0) | EXPOSURE Single Slope | |
| <i>RW</i> | This is the total exposure time in single/dual/triple slope mode. | |
| | This register is double buffered. | |
| Value at Reset: | 0x0 | |
| Possible Values: | Any Value | Any 28 bits value |

EXP_CTRL2

| | | |
|------------------------------------------|-------------------------------------------------------------------------------------------------------------|-------------------|
| TRIGGER_DELAY (27:0) <i>RW</i> | TRIGGER_DELAY | |
| | This is the trigger delay. This trigger delay can be applied to HW(Only edge mode), SW and Continuous mode. | |
| | In HW level mode, the trigger cannot be delayed, since the level time represents the exposure time. | |
| | This register is double buffered | |
| Value at Reset: | 0x0 | |
| Possible Values: | Any Value | Any 28 bits value |

STROBE_CTRL1

Address: section "ACQ" base address + 0x048

| | | | | | | | |
|---------------------|----------|----|----------------|---------------------|----|----|----|
| 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 |

| | | |
|------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| STROBE_E <i>RW</i> | STROBE Enable | |
| | This register enables the strobe logic. | |
| | For Nexis 3 systems, to enable STROBE_A signal, STROBE_E and STROBE_A_EN must be enabled. For Nexis 3 systems, to enable STROBE_B signal, STROBE_E and STROBE_B_EN must be enabled. | |
| | For Nexis 3 systems, STROBE_A and STROBE B can be activated at the same time, in this case the two strobes will be the same as they share the same programming. | |
| | This register is double buffered | |
| Value at Reset: | 0x0 | |
| Possible Values: | 0x0 | Strobe disabled |
| | 0x1 | Strobe enabled |

| | | |
|--------------------------------|--------------------------------------------------------------------------|--------------------|
| STROBE_POL <i>RW</i> | STROBE POLarity | |
| | This is the strobe polarity at the pin of the FPGA only for GTR systems. | |
| | For NEXIS3 systems use register ANPUT\IO\IO_OUT_POL\OUTx_POL | |
| | This register is not double buffered. | |
| Value at Reset: | 0x0 | |
| Possible Values: | 0x0 | Active high strobe |
| | 0x1 | Active low strobe |

| | | |
|-----------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|
| STROBE_START (27:0) <i>RW</i> | STROBE START | |
| | This is the strobe start location. This location depends on the Strobe Mode used. | |
| | In Strobe Mode='0', the start of the strobe is situated during the exposure time. In Strobe Mode='1', the start of the strobe is situated during the trigger delay. | |
| | This register is double buffered | |
| Value at Reset: | 0x0 | |
| Possible Values: | Any Value | Any 28 bits value |

STROBE_CTRL2

Address: section "ACQ" base address + 0x050

| STROBE_END(7:0) | | | | | | | |

| | | |
|---------------------------------|------------------------------------------------------------------------------------------------------|-----------------------------------|
| STROBE_MODE <i>RW</i> | STROBE MODE | |
| | This register selects the location of the Strobe Start. | |
| | When this register is set to 0, the STROBE_START register is located during the exposure timer. | |
| | When this register is set to 1, the STROBE_START register is located during the trigger delay timer. | |
| | In HW level mode the strobe mode must be set to STROBE MODE=0 since the trigger cannot be delayed. | |
| | This register is double buffered | |
| Value at Reset: | 0x0 | |
| Possible Values: | 0x0 | Strobe start during exposure |
| | 0x1 | Strobe start during trigger delay |

| | | |
|---------------------------------|------------------------------------------------------------------------------|------------------|
| STROBE_B_EN <i>RW</i> | STROBE phase B ENable | |
| | This field enables the generation of STROBE_B signal, for a NEXIS 3 system. | |
| | This register is double buffered to support back2back mode in nexis systems. | |
| Value at Reset: | 0x0 | |
| Possible Values: | 0x0 | Enable Strobe B |
| | 0x1 | Disable Strobe B |

| | | |
|---------------------------------|---------------------------------------------------------------------------------------------|----------------------------------|
| STROBE_A_EN <i>RW</i> | STROBE phase A ENable | |
| | This field enables the generation of STROBE_A signal(Default strobe), for a NEXIS 3 system. | |
| | This register is double buffered to support back2back mode in nexis systems. | |
| Value at Reset: | 0x1 | |
| Possible Values: | 0x0 | Enable Strobe A (default strobe) |
| | 0x1 | Disable Strobe A |

| | | |
|---------------------------------------|-----------------------------------------------------------------------------------------|-------------------|
| STROBE_END (27:0) <i>RW</i> | STROBE END | |
| | This is the strobe end location. This location does not depend on the Strobe Mode used. | |
| | This register is double buffered | |
| Value at Reset: | 0xffffffff | |
| Possible Values: | Any Value | Any 28 bits value |

Address: section "ACQ" base address + 0x058

| Reserved | | | SER_RF_SS | Reserved | | | SER_WF_SS |

| | | |
|------------------|---------------------------------------------------------------------------|--------------|
| SER_RWn | SERial Read/Writen | |
| <i>RW</i> | This register configures the type of the serial access to the CMOS sensor | |
| Value at Reset: | 0x1 | |
| Possible Values: | 0x0 | Write access |
| | 0x1 | Read access |

| | | |
|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------|
| SER_CMD (1:0) | SERial CoMmand | |
| <i>RW</i> | This is the type of command sent to the serial fifo. To access the Sensor, write SER_WF_SS=1 with SER_CMD=0x0, with the parametters: SER_WRn, SER_ADD(8:0) and SER_DAT(15:0). To insert a timer between fifo commands, write SER_WF_SS=1 with SER_CMD=0x1, with the parameter: SER_DAT(15:0). The value of the timer inserted is calculated with the following formula: $\text{Timer} = \text{SER_DAT}(15:0) * 1024 * \text{SYS_PERIOD}$, SYS_PERIOD is 1/62.5mhz. The granularity of the timer is 16.384us To insert a Stop separator command, write SER_WF_SS=1 with SER_CMD=0x3. When the read logic encounter this command, it will stop read from the fifo until a new SER_RF_SS is received. | |
| Value at Reset: | 0x0 | |
| Possible Values: | 0x0 | CMOS sensor access COMMAND |
| | 0x1 | Insert timer COMMAND |
| | 0x2 | STOP separator COMMAND |
| | 0x3 | RESERVED |

| | | |
|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| SER_RF_SS | SERial Read Fifo SnapShot | |
| <i>WO/AutoClr</i> | This is the read fifo snapshot. When the read fifo logic receives this snapshot, it will read all the fifo comands until a STOP separator command is read or Empty fifo is detected. | |
| Possible Values: | 0x0 | Idle |
| | 0x1 | Start Read FIFO |

| | | |
|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------|
| SER_WF_SS | SERial Write Fifo SnapShot | |
| <i>WO/AutoClr</i> | When the system toggle this bit, the address, data and command are wrote to the command fifo. This fifo can contain the entire dcf, so the driver will not need to pool the status bit. This is a auto reset bit register, so after the driver write one, the bit will be auto reset to 0. To start the FIFO read logic write '1' to regsiter SER_RF_SS. | |
| Possible Values: | 0x0 | Idle |
| | 0x1 | Write a command to the FIFO |

| SENSOR_REFRESH_TEMP <i>WO/AutoClr</i> | SENSOR REFRESH TEMPerature | | | | | | |
| | This register starts a sensor temperature read on the serial interface of the Python sensor. The temperature value readed will be available on field SENSOR_TEMP when field SENSOR_TEMP_VALID is set to '1'. [Pas utilise pour le moment dans IRIS4] | | | | | | |
| Possible Values: | 0x0 | Idle | | | | | |
| | 0x1 | Starts a Temperature read on Python SPI interface | | | | | |

| | | | | | | | |
|----------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|--|--|--|
| SENSOR_POWERDOWN <i>WO/AutoClr</i> | | | | | | | |
| | After a PowerUp sequence(SESOR_POWERUP_DONE=1), successfull or not, this register can reset the clock oscillator and enable the reset to the sensor. This power down don't do power sequencing. | | | | | | |

| | | | | | | | |
|----------------------------------|--------------------------------------------------------------------------------------------------------------------------|-------------------|--|--|--|--|--|
| SENSOR_COLOR <i>RW</i> | SENSOR COLOR | | | | | | |
| | This register informs the datapath logic that a color sensor is used. This information is needed for the remapper logic. | | | | | | |
| Value at Reset: | 0x0 | | | | | | |
| Possible Values: | 0x0 | Monochrome sensor | | | | | |
| | 0x1 | Color sensor | | | | | |

| | | | | | | | |
|---------------------------------------|--------------------------------------------------------------------------------------------------------------------------------|-------------------------|--|--|--|--|--|
| SENSOR_REG_UPDATE <i>RW</i> | SENSOR REGister UPDATE | | | | | | |
| | By setting this bit to 1, the SENSOR CONTROLLER WILL UPDATE the programed CMOS sensor registers at the beginning of each grab. | | | | | | |
| Value at Reset: | 0x1 | | | | | | |
| Possible Values: | 0x0 | Do not update registers | | | | | |
| | 0x1 | Update registers | | | | | |

| | | |
|----------------------|-----------------------------------------------------------------------------------------------|----------------------------------------------|
| SENSOR_RESETN | SENSOR RESET Not | |
| <i>RW</i> | After a successfull PowerUP sequence, writing this field to '0' reset the Python CMOS sensor. | |
| Value at Reset: | 0x1 | |
| Possible Values: | 0x0 | Reset the sensor after a successfull powerUP |
| | 0x1 | Nothing |

| | | |
|-----------------------|---------------------------------------------------------------------------------|--------------------------|
| SENSOR_POWERUP | | |
| <i>WO/AutoClr</i> | This register Enables the clk oscillator and removes the reset from the sensor. | |
| Possible Values: | 0x0 | idle |
| | 0x1 | Start the power sequence |
